

testing::Test

```
classDiagram
    class testingTest["testing::Test"]
    class userAuthenticationTest
    testingTest <|-- userAuthenticationTest
```

The diagram shows a class hierarchy. At the top is a class box for 'testing::Test' with two empty compartments. Below it is a class box for 'userAuthenticationTest' with three compartments: the top one contains the class name, the middle one is empty, and the bottom one contains two methods, '# SetUp()' and '# TearDown()'. A blue arrow with an open triangle head points from the 'userAuthenticationTest' box up to the 'testing::Test' box, indicating that 'userAuthenticationTest' inherits from 'testing::Test'.

userAuthenticationTest

#    SetUp()

#    TearDown()
